CS 146-A Project

Project Name:

Hoboken Eats

Team Members:

Kyle Halton

Mariam Dardir

Anthony Dimayo

Harrison Hudson

Website Description

      Hoboken Eats is our team's take on a resturant recommendation website. Our website will host a list of features including restaurant reviews/recommendations based on user-defined criteria, a quiz, and more. On the home page, the user's can navigate through a nav-bar on the top of the screen. The restaurant review page will contain our own reviews of restaurants our team has been to. Also, the user will be able to leave their own review of a certain restaurant as well. Eventually, the user will be able to filter this information by certain criteria including name, price, and food type. Furthermore, each page about a restaurant will include a photo of said restaurant, general information about the food, contact information, reviews, and a Google map portion that shows where the restaurant is. The quiz feature allows indecisive users to input what kind of food they want as well as other information for the website to use to recommend restaurants to them. Finally, we have an about page that highlights our mission statement as well as to display our team members.

HTML Elements Used

- p
- img
- div
- a
- input
- h1
- body
- table
- thead
- tr
- html
- hr
- h2
- button

Appearence Modifications

1. Be able to fit text and images together in a row without the use of a table
2. Styling the background to be a different color
3. Change the font and font size for certain elements
4. Allowing dynamic sizing of elements based on window screen size
5. Add functionality to buttons (CSS + JS required)
   a. Sorting
   b. Leaving review
6. Map functionality with Google Maps
7. Quiz functionality
